

System Description for T267 Team System

01

数据使用

02

系统模型结构

03

模型融合

04

实验结果

一、数据使用

➤ 原始数据:

CNCVS: 300hours
 Single-dev: 83.7hours
 Multi-dev: 18 hours

➤ 数据使用策略:

加噪扩充: add salt and pepper noise;
 Gaussian blur
 Single-dev: $83.7 \times 2 = 166$ hours
 Multi-dev: 36 hours

Hours

Table 1. Data profile of CNVSRC-Single and CNVSRC-Multi.

	CNVSRC-Single		CNVSRC-Multi	
DataSet	Dev	Eval	Dev	Eval
# Videos	25,947	2,881	20,450	10,269
# Hours	94.00	8.41	29.24	14.49

二、系统方案描述

➤ 模型结构

VSR Encoder: Con3dResNet

Conformer Encoder: adim 768, ahead 12, eunits 3072, elayer 12 cnn kernel 31,

Transformer Decoder: ddim 768, dhead 12, dunits 3072, dlayers 6

建模单元: 以汉字作为建模单元 (4705个), 代替bpe建模

LSTM-LM: 6layers, 1024 units

Transformer-LM: 6 layers, 1024 units, embed-unit 128, att-unit: 512

➤ 训练策略

(1) Joint CTC/Attention training, CTC weight=0.1

(2) 以model_avg_14_23_cncvs_4s.pth模型作为种子模型

(3) 第一阶段的训练: 利用CNCVS 300hours训练模型

(4) 第二阶段finetuning: 利用各自赛道的Dev以及扩充数据进行微调

三、模型融合与实验结果

- 模型结果融合：
利用ROVER方法对所有模型的解码候选文本进行融合处理

- 实验结果
Eval: single-speaker: 41.62%; multi-speaker: 54.55%

Table 1: The results of our system

method	training set(hours)	finetuning set(hours)		single-speaker dev CER	multi-speakers dev CER
		T1	T2		
baseline	287	83.7	18	48.57%	58.77%
char model unit	287	83.7	18	43.59%	56.77%
+video aug	287	166	36	42.30%	54.74%
+RNN LM				42.18%	
+transformer LM				42.16%	
+model fusion				41.50%	

THANKS.

谢谢
